Professional Summary

Technical Support Engineer with 5+ years of experience supporting production SaaS platforms and distributed systems where reliability and rapid incident resolution are critical. Experienced in API integrations, incident response, Root Cause Analysis (RCA), log analysis, and SQL-driven investigations.

Technical Skills

Production Operations: Incident response (P0/P1), escalation management, SLA/SLO monitoring, Root Cause Analysis (RCA), postmortems, fault isolation, production troubleshooting.

API & Integration Technologies: REST APIs, Webhooks, OAuth 2.0, JSON, HTTP/HTTPS, distributed systems, API troubleshooting.

Cloud, Data & Infrastructure: AWS, Docker, Linux, Terraform, Nginx, SQL (MySQL, SQLite), CI/CD (GitHub Actions, Jenkins).

Engineering Tools & Collaboration: Postman, cURL, Jira, Confluence, Linear, technical documentation, cross-functional collaboration.

Professional Experience

Technical Support Engineer

Rootly | Remote

Sep 2024 – Feb 2026

- Supported multi-region SaaS infrastructure by investigating REST APIs, webhook pipelines, and OAuth authentication issues across distributed services.
- Investigated P0/P1 production incidents using structured log analysis, request tracing, and cross-service troubleshooting.
- Performed Root Cause Analysis (RCA) for race conditions, retry storms, and high-concurrency integration failures, partnering with Engineering to identify long-term improvements.
- Refined schema validation, retry strategies, and operational documentation to simplify troubleshooting and support platform growth.
- Collaborated with Engineering teams to improve production support workflows and strengthen incident response practices.

Technical Support Specialist II

PagerDuty | Remote

Jan 2023 – Aug 2024

- Served as a senior escalation point for high-severity API ingestion and alert-routing incidents across enterprise SaaS environments.
 - Conducted protocol-level debugging involving HTTP, JSON schemas, OAuth, log analysis, and SQL investigations to resolve complex integration issues.
 - Developed internal automation and support tooling to simplify cross-service troubleshooting and operational workflows.
 - Partnered with Engineering and Product teams to refine integration guidance and support platform reliability.
 - Documented recurring investigation patterns and troubleshooting practices to improve knowledge sharing across support teams.
-

Integration Support Engineer

Pago Fácil | Chile

Jan 2020 – Jan 2023

- Supported high-volume payment gateway integrations in production environments.
 - Performed SQL analysis and log investigations to resolve reconciliation discrepancies and transaction failures.
 - Investigated API contract mismatches, webhook delivery issues, and payload validation errors across payment integrations.
 - Refined retry strategies and fault-isolation practices to support reliable payment processing.
 - Collaborated with Engineering and Operations teams to support production releases and resolve integration-related issues.
-

Education & Certifications

DevOps Specialization | Universidad de Santiago de Chile

System Analyst (Summa Cum Laude) | Instituto CIISA

Python for Everybody Specialization | University of Michigan

Okta Certified Professional
